Title: Identification of DWI Hardware by Serial Number

At times it may be necessary to identify a piece of Dragonwave Inc. manufactured hardware with limited information available. Using the table below, it should be possible to identify hardware revisions, radio bands, and frequency banks based solely on the hardware serial number.

All Dragonwave Inc. equipment bears a label with a part number and serial number. Additionally, hardware serial numbers can be determined through the system's user interface. (Web interface or CLI)

AirPair hardware serial numbers can be determined using the following CLI (serial port, SSH, or telnet) commands:

get serial number Returns the current modem serial number.

get radio serial number Returns the currently connected radio's serial number.

Using the first two numeric digits of an AirPair product serial number, one can determine the hardware type by referring to the table below.

* Note that this table may include un-released products; please contact Dragonwave Inc. for availability of individual products.

Horizon Compact hardware serial numbers can be determined using the following CLI (SSH or telnet) command:

get hw inventory Returns the Horizon Compact hardware serial numbers.

Using the first three digits of a Horizon Compact product serial number, one can determine the hardware type by referring to the table below.

There are two copper Ethernet connector types available on the Horizon Compact, if the last four numeric digits of the serial number exceed 1000, the standard Ethernet connector is used. This is the currently shipping type.
